

KaamYaar — Backend Schema (v1)

Version: 1.0

Database: PostgreSQL (Supabase)

Primary Rules:

- UUID everywhere
 - created_at everywhere
 - updated_at everywhere
 - soft delete preferred
 - RLS enabled
 - UTC timestamps
-

1. USERS

Purpose:

Identity layer.

Columns:

id UUID PK

phone TEXT UNIQUE

full_name TEXT

email TEXT NULL

profile_image TEXT

role TEXT

customer worker admin

is_active BOOLEAN

created_at TIMESTAMP

updated_at TIMESTAMP

Indexes:

phone

role

Relationships:

users ↓

workers

users ↓

addresses

users ↓

bookings

2. SERVICES

Purpose:

Available service categories.

Columns:

id UUID PK

name TEXT

slug TEXT UNIQUE

icon TEXT

description TEXT

base_price DECIMAL

is_active BOOLEAN

sort_order INT

created_at

updated_at

Example:

electrician

plumber

cleaning

ac_repair

3. WORKERS

Purpose:

Worker profile.

Columns:

id UUID PK

user_id UUID FK

service_id UUID FK

bio TEXT

experience_years INT

hourly_rate DECIMAL

rating DECIMAL

total_reviews INT

completed_jobs INT

verification_status TEXT

pending approved rejected

online_status BOOLEAN

response_rate DECIMAL

service_radius_km INT

created_at

updated_at

Indexes:

user_id

service_id

online_status

verification_status

Relationships:

users ↓

workers

services ↓

workers

4. WORKER_DOCUMENTS

Purpose:

Verification.

Columns:

id UUID

worker_id UUID

document_type TEXT

cnic selfie certificate

file_url TEXT

status TEXT

created_at

5. ADDRESSES

Purpose:

Saved locations.

Columns:

id UUID

user_id UUID

label TEXT

address TEXT

latitude DECIMAL

longitude DECIMAL

is_default BOOLEAN

created_at

updated_at

Indexes:

user_id

6. BOOKINGS

Purpose:

Core business object.

Columns:

id UUID

customer_id UUID

worker_id UUID NULL

service_id UUID

address_id UUID

problem_description TEXT

scheduled_time TIMESTAMP

estimated_price DECIMAL

final_price DECIMAL

status TEXT

pending

assigned

accepted

on_the_way

arrived

in_progress

completed

cancelled

paid

created_at

updated_at

Indexes:

customer_id

worker_id

status

created_at

Relationships:

customer

↓

booking

↓

worker

7. BOOKING_PHOTOS

Purpose:

Issue uploads.

Columns:

id UUID

booking_id UUID

image_url TEXT

created_at

8. WORKER_LOCATION

Purpose:

Live tracking.

Columns:

id UUID

worker_id UUID

booking_id UUID

latitude DECIMAL

longitude DECIMAL

accuracy DECIMAL

recorded_at TIMESTAMP

Indexes:

worker_id

booking_id

recorded_at

Retention:

Delete after 30 days

9. PAYMENTS

Purpose:

Payments.

Columns:

id UUID

booking_id UUID

amount DECIMAL

method TEXT

cash

easypaisa

jazzcash

status TEXT

pending

success

failed

transaction_reference TEXT

paid_at TIMESTAMP

Indexes:

booking_id

10. REVIEWS

Purpose:

Ratings.

Columns:

id UUID

booking_id UUID UNIQUE

customer_id UUID

worker_id UUID

rating INT

review TEXT

created_at

Constraints:

rating 1-5

11. NOTIFICATIONS

Purpose:

Push history.

Columns:

id UUID

user_id UUID

title TEXT

body TEXT

type TEXT

is_read BOOLEAN

sent_at TIMESTAMP

Indexes:

user_id

12. BOOKING_STATUS_HISTORY

Purpose:

Audit trail.

Columns:

id UUID

booking_id UUID

old_status TEXT

new_status TEXT

changed_by UUID

changed_at TIMESTAMP

13. WORKER_AVAILABILITY

Purpose:

Schedule.

Columns:

id UUID

worker_id UUID

day_of_week INT

start_time TIME

end_time TIME

enabled BOOLEAN

14. ADMIN_ACTIONS

Purpose:

Admin logs.

Columns:

id UUID

admin_id UUID

action TEXT

target_type TEXT

target_id UUID

created_at

REALTIME EVENTS

booking_created

booking_assigned

booking_accepted

worker_location_updated

payment_completed

review_added

STORAGE BUCKETS

profile-images

worker-documents

booking-photos

SECURITY RULES

Customer:

Only own records

Worker:

Assigned records only

Admin:

Full access

Uploads:

Authenticated only

DATA RETENTION

Worker Location:

30 days

Notifications:

90 days

Bookings:

Permanent

Logs:

180 days

FINAL RULE

Database must reflect business.

Never let UI define schema.
